

Dear Suppliers, Contractors and Partners,

Safety is a core value at TriHealth, and our partnerships are crucial to keeping our patients, visitors, staff and partners safe.

Please review the following information related to the coronavirus outbreak, also known as COVID-19. These prevention efforts, which are in line with other healthcare organizations and the Centers for Disease Control and Prevention, are effective immediately.

- All non-essential supplier meetings will be conducted via teleconference or VMR. Access will be limited to those vendors who are directly involved supporting procedural patient care or daily operations.
- If you have traveled to a country within the last 14 days that the CDC has designated as Level 3 Warning or Level 2 Alert, you may NOT enter a TriHealth facility until you have been back in the United States AND have exhibited no symptoms of the COVID-19 virus for 14 days. This also applies to domestic travel in designated CDC areas.
 - If upon your return you experienced any symptoms, you may not enter a TriHealth facility until you have been symptom free for 14 days
- Additionally, regardless of travel status, if you are experiencing any respiratory-related symptoms you may not enter a TriHealth facility.
- All suppliers who access each facility will be required to complete a travel and symptom screening.

If you are unable to enter a facility for any of these reasons and your presence is critical to providing patient care, please coordinate a replacement to provide the needed support.

These requirements are in place until further notice. We appreciate all you do to partner with TriHealth to improve the health of the communities that we are so privileged to serve. This includes challenging times like now and throughout the year.
